Using Dragon® Medical One in ambient workflows

Every patient visit is unique and clinicians need the right solutions to fit the task at hand. Dragon Medical One, with its advanced speech capabilities, works seamlessly with DAX Copilot and provides flexible options for completing patient notes and beyond.

Patient preferences

- For when the patient does not consent to ambient recording
- For when the patient cannot consent (e.g., trauma, critical care, disoriented patients, non-verbal patients)
- For when the patient prefers clinician to dictate in front of them

Workflow accelerators

- For editing AI-generated content using voice and navigational commands
- For forms and highly templated documents such as procedure notes and well-child visits
- To accelerate documentation workflows with pre-configured Step-by-Step commands and AutoTexts

Beyond the note

- For dictating beyond the visit, including discharge summaries, operative reports, return to work letters, emails, and more
- For reviewing and navigating clinical content
- For managing and controlling your inbox to review and take action on results, respond to care team and patient messages, search for information, and more
